

« **meal time...** Turn canvas couture into a trendy timepiece. We primed a blank canvas with a painted design (you can use stencils for this if you wish). Then, we added iron-on letters and a handy clock mechanism. Love it!

» **etched in time...** This mirror tells a timely tale of elegance. We used an engraving tool to etch the pretty clock face. **Tip:** The engraving tool doubled as a drill in this case. We used it to create the opening for the clock mechanism.

» **dish de-lish...** Plate too full for complicated design? Then this simple project is just what you ordered. Stack designer plates (available in Home Accents) and glue them together. Then drill holes to install the clock movement. You can even paint the hands if you're inclined. **Tip:** Drill a pilot hole and drill slowly to avoid damaging the plates.

**here's how to do it...**

*Note: The clock face must first be placed on a sturdy base before installing the clock mechanism.*

1. Remove all components from clock shaft (A) except the silver hanger (B).
2. Place rubber cushion (C) over shaft.
3. Insert shaft through clock face (D).
4. Slide brass washer (E) over shaft.
5. Attach dial mounting hex nut (F). Do not overtighten.
6. Gently press the hour hand (G) onto the shaft.
7. Place the minute hand (H) over the shaft.
8. Gently screw the minute nut (I) into place.
9. Press on second hand (J).
10. Insert a battery and set the time by turning the time-set knob on the back of the clock movement or by rotating the minute hand.

*Time's a tickin' so clock in and get crafty! With our wide selection of easy-to-install clock parts, it's like*

# Clockwork!

make some time...literally!

{CREATIVE INSPIRATIONS *free* FROM HOBBY LOBBY®}

**for the record...** Thrift store vinyl just in time! We added vintage-style scrapbook paper, self-adhesive numerals and simple clock components. *Tip: Want to lend your clock hands some designer appeal? Give them a quick, coordinating paint job!*

**palette pleaser...** Artistic triumph on a quirky timepiece? You bet! This artist's palette was embellished with the tools of the trade and outfitted with a slightly altered clock mechanism. Look closely... we hot glued a paintbrush to the second hand!

**bike delight...** Just call it needle by number! We placed the hand-embroidered piece on a self-adhesive mounting board before framing. Then, we painted the hands and installed the clock mechanism.

**creature couture...** This clock corners the market on woodland whimsy. It features a simple bare wood plaque, painted with bright acrylics and outfitted with our easy-to-install clockworks—the hands are painted to match the design.

**ONCE UPON A TIMEPIECE. CRAFT A HOUSEFUL OF IMAGINATIVE TIMEPIECES, USING EVERYDAY OBJECTS AND OUR EASY-TO-INSTALL CLOCK COMPONENTS.**

Visit [www.HobbyLobby.com](http://www.HobbyLobby.com) for even more clock projects and for more details about the projects shown here!

**minute memo...** It's a paper trail that's all about keeping time! This adorable desk clock was made with foam board (used for stability), sandwiched between a pair of cork tiles. We installed the clockworks before literally tacking the numbers into place.

**bookish beauty...** This faux storage book (available in Home Accents) was turned into fully functional décor. And it was so easy! Since the piece was already hollow, we simply opened the cover, drilled through the center and installed the clockworks. Self-adhesive numerals rounded out the timely design.

**it's a puzzle...** We've always got time for games! This puzzle piece began as bare wood (available in the Craft Department). We added acrylic paint (with brushes, sponges and stencils). And we finished with our simple clockworks.

**clock box...** This tick-tock collage features found objects, ephemera and plenty of pretty adornments. The numerals are rub-ons, artfully added to vintage-style scrapbook embellishments. And for shimmery detail, we even glittered the clock hands to match our design.

**across the board...** This memo board is more than meets the eye. It's actually a working clock! To make your own, add clock components to an ordinary dry erase board. Then, draw on a simple clock face. Easy, fun and affordable!

**chalk it, clock it...** A circle of bare wood (available in the Craft Department) makes the perfect base for a one-of-a-kind chalk clock. We primed the base with chalkboard paint before installing the mechanism. Since the clock face is drawn with ordinary chalk, it's not only cute...it's also changeable!
